

Queue Management System

MICROTOUCH is the new multi service queue management system projected by VISEL for Pharmacies. It's a flexible solution that allows good functionality and price using the existing LAN network. QS-MICROTOUCH unit is a 9.7" touch-screen thermal printer available with desk, wall and floor stand holders. It includes the SOFTOUCH management software and license for virtual consoles to install on operator's PC. Calls are shown on main standard LCD screen connected to the player box QS-PHARMABOX via HDMI cable. The monitor has a standard screen layout with time, weather, RSS news and shows the last three calls as well as multimedia contents and promotional messages. The system include also a 10" LCD display to show the number called by each counter, also connected to the LAN network. MICROTOUCH system use a very user friendly configuration including a text-to-speech engine for vocal calling. The queue management software must be installed on a PC within the LAN network to find all the hardware units and configure the system.

As required by law, all MICROTOUCH's units bear the CE mark.

Note: All **MICROTOUCH** units can run via Wi-Fi.

Queue Management System

- Position 1** - Logo and Company name;
- Position 2** - Last 3 calls;
- Position 3** - Multimedia content, images and video;
- Position 4** - Latest news (RSS);
